

Waste Connections of Colorado

Residential Trash and Recycling Guide

Recycling

Waste Connections encourages its customers to recycle whenever possible to reduce costs and help conserve our country's natural resources and energy consumption costs.

Glass, plastic, tin, and aluminum should be separated from the paper products. Waste Connections will provide one recycle container at no charge. Additional plastic tubs, containers, or bags for paper recycling may be used. Please place the recycle materials on the opposite side of the driveway or 8 to 10 feet away from the trash cart. Recycle pick-up is scheduled for the same day as trash service.

Plastics

Plastic bottles and jugs are good. Please discard screw-on caps and pumps. **No** motor oil or hazardous materials containers. **No** foam, shrink wrap, bags, or tubs.

Metals

Aluminum, tin, steel – please rinse cans if needed. **No** aerosol cans, hangers, nor wire.

Glass

Bottles and jars ok – please rinse if needed. **No** window or mirror glass, light bulbs, drinking glasses, vases, ceramics, cookware, or broken glass.

Paper Products

Newspaper, junk mail, office paper, magazines, catalogs, telephone books, paperboard (such as cereal boxes and tissue boxes), and paper bags.
No wax coated or food contaminated boxes, pet food bags, tissues, napkins, or paper towels.
Please secure the paper so the wind does not blow it around the neighborhood.

Corrugated Cardboard

Corrugated cardboard boxes should be flattened and cut to a size that will fit inside the Waste Connections recycle container. Corrugated cardboard may also be placed outside and next to the recycle containers. Please secure the cardboard to ensure that the wind does not blow it around the neighborhood.

Other

Milk cartons, juice boxes should be rinsed with any plastic caps, spouts, or straws removed.

Trash Collection

Trash and recycling should be at curbside by 7:00 am on scheduled pick-up days.

The HOA pays for one 90 Gallon trash container and unlimited recycling per week.

Extra trash and large item removal can be arranged with a 24 hour advance call to Waste Connections. The extra charge will depend upon the amount and size of disposal.

No hazardous waste, aerosol, liquid paint, batteries, propane or other gas canisters, computer monitors, oil, or chemicals. Filling the container with dirt, sod, or rock could cause it to be too heavy for handling.

Collection for Holidays

If a holiday falls on or before your scheduled pick-up day, your collection will be delayed by one day. Holidays observed: Memorial, Independence, Labor, Thanksgiving, Christmas, New Year's.

A replacement fee will apply if a company owned container is lost or damaged beyond normal use and wear.

Waste Connections-Town & Country Disposal Customer Service – 303-288-2100

Why Recycle?

Manufacturing the goods that we use everyday consumes a large amount of energy. Many recyclable items are trashed by too many people, and the energy used in their production is rarely considered. Using recycled material as the feedstock for manufacturing consumes far less energy than manufacturing products from virgin (raw) material.

Energy production from fossil fuel combustion has a major negative impact on our environment. Radiation risks are a potential by-product of nuclear power.

Recycling Benefits

Preservation of our non-renewable energy and materials resources.
Less energy related environmental damage.
Less dependence on middle east oil.

Did you know?

For every ton of post-consumer waste, there are 20 tons of hidden pre-consumer waste, as the manufacturing process makes its way from the forest and mine to the supermarket shelf.

In the U.S., the manufacturing process of just four materials – paper, plastics, chemicals, and metals – account for 71% of all toxic emissions.

Energy saved from recycling one glass bottle will operate a 100 watt light bulb 4 hours.

Energy saved from recycling one aluminum can will operate a computer for 3 hours.

Recycling 7 steel soup cans saves enough energy to operate a 60 watt light bulb for 26 hours.

Every ton of paper recycled saves 12,000 gallons of processed water.

For every ton of paper recycled: 17 pulpwood trees are conserved, 500 pounds of air pollutants are not emitted, water pollution is reduced by 40%, the energy equivalent to 96 gallons of gasoline is conserved.

23 billion kilowatt-hours are squandered globally each year through "replacement production" of aluminum cans. About 7 kwh are saved per pound (33 cans) when the cans are recycled. Had the billions of cans trashed been recycled, the electricity saved could power 1.3 million American homes.
